

Data Collection in PNS

Students in PNS took advantage of the winter sunshine to collect some data about traffic passing by on Greythorn Road. Before heading outside, the students chose the car colours which they thought they would see. Then they spent about 10 minutes counting the cars and making tally marks to record. Tallying and data collection are fun aspects of the mathematics curriculum to investigate. This work was followed up in the classroom with a simple graphing activity using the information collected.
