

1LH Physical Science

The Problem:

Many of the Greythorn Toy Company's toys have been around for years and years. People can buy them cheaply at garage sales. They are even given away for free from one family to another after the children outgrow them. A new and engaging push-pull toy would help the company and provide hours of enjoyment for today's children.

The Task:

To design and build a prototype of a simple toy that moves with a push or pull of one finger.
