

The Forces of Tuna

In Term 4 Science, Class 412 have started a physical science unit called 'Smooth Moves'. We are all super excited about designing and testing out the way forces interact with each other.

Just this week we worked in collaborative groups to look closely at ways we could use pushing and pulling to make an everyday object, like a can of tuna, move. Making predictions, exploring and observing are all ways we use our inquiry skills to better understand these concepts.
